Model  
750H

Absence of sharp corners minimize potential for hoof damage

Feeder can be pinned to prevent moving

Designed and fabricated for efficiency and long life, Farmco horse and small animal feeders are the choice of professionals. Constructed of welded 12-gauge steel, primed and painted with rust resistant paint, they are virtually indestructible. These feeders have no sharp edges that will injure animals and will stay put when placed. They are easily moved from one location to another and can be pinned to the ground for greater security. Feeding both hay and grain, Farmco feeders are great tools to use in confinement areas or in the pasture. A variety of sizes, both in length and height, provide a model for horses from the largest draft animal to miniatures. The 750 round bale feeder has safe, comfortable hoops to ensure that the all of the family keep their place at the table. Its two piece construction makes moving it simple with the removal of two pins.

# SMALL ANIMAL FEEDERS

The Model 4832S, constructed with the same integrity as the horse feeders, is great for miniature horses. And don't forget the sheep and goats. The lambs will love it.

Model 4832S
